Powder barrel from Sea of Thieves, modeled from scratch based on a screenshot. Rather than have it as 1 individual file I have it broken down into 20 pieces that assemble without glue. Note the features are line-on-line, zero gap/clearance so if your printer isn't precise you may need to size up/down some of the features. The model assembled brilliantly for me without any sanding and without any glue.

Let me know if you have any suggestions.
