Gizo is a cute little spider looking to stir up mischief. This adorable trickster has print in place leg hinges and doesn't require support. Best of all, it's a great use for that glow in the dark filament roll that everyone has on the shelf. Happy Halloween!

*Print one body and two of each of the eyes. The large eyes pop in place and stay, but you may need a little glue to keep the little ones on. I've included a second eye file for dual extrusion prints. Fit gap is set at .2mm, so I suggest printing at .2 layer height or lower at the current scale. You'll probably need to add a raft or brim to get all the feet to stick.

**Added a LegTest to help calibrate. The fit gap is .2mm (ideal for Cetus or Tiertime printers.) If this doesn't print clean on your printer, you can scale the test leg up until you get enough gap for moving legs.
