Summary

A snazzy vase with a lot of sine waves involved :)

Household > Home Decor

Vases are really just an excuse to play with shapes, and in this case, math functions :D Here we have a profile composed of a sine curve combined additively with a polynomial to get that nice curve at the base. But that's not all! The texture comes from yet another sine curve zig-zagging up the whole thing.

Make sure to select vase mode in your slicer for this one!

Enjoy!
