This is a mashup between [DrJones's](#) design "[christmas tree](#)" and my design "[Ribbon Christmas tree](#)".

While the original model weighed only 20g this one weighs about **80g**; **the spring and the star are compatible between the two models.**

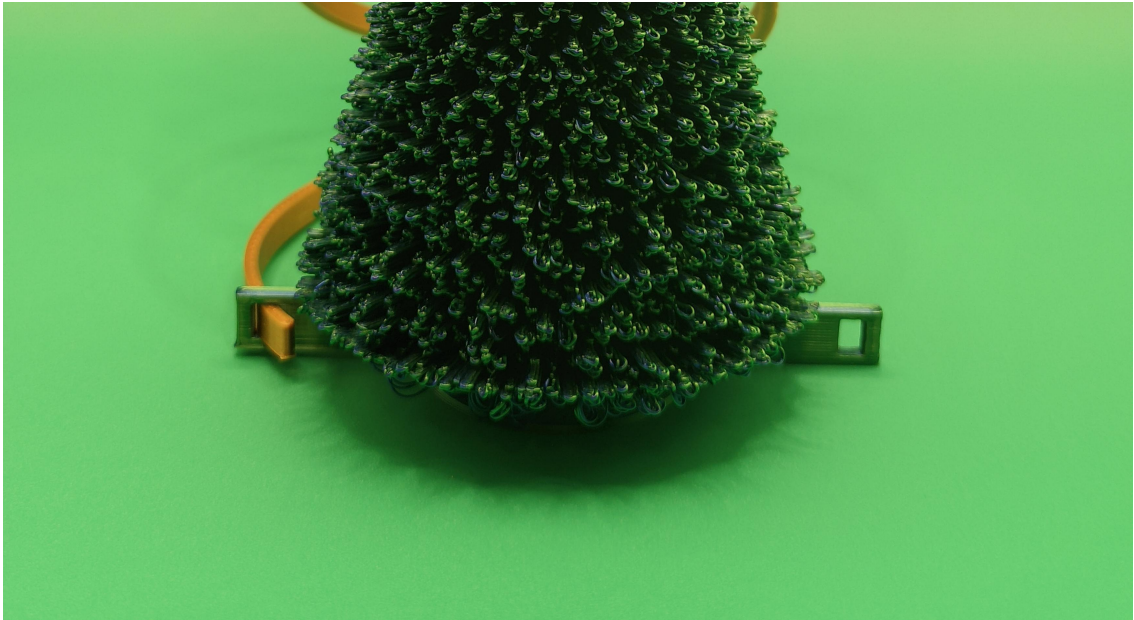

I recommend printing all the pieces **without supports** (the STL files already contain the correct positioning of the pieces to avoid supports).

INSTRUCTIONS

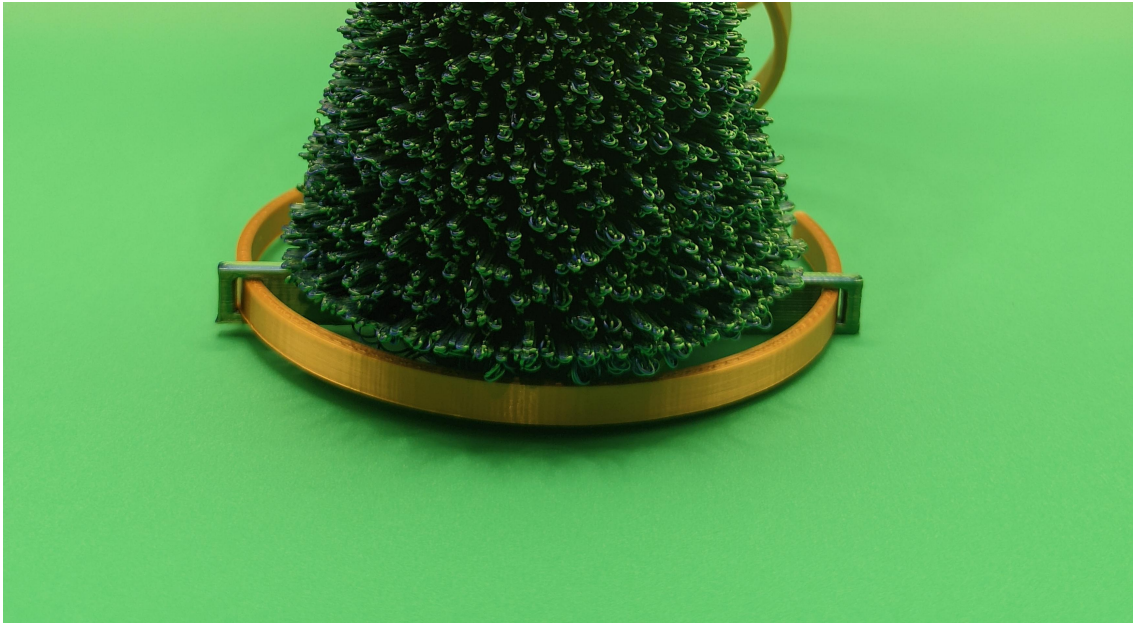

1. Stretch the spring a bit so that you can work with it better;

2. insert the lower end of the spring into the first hole at the base of the tree, as shown in the photo;

3. insert the lower end of the spring into the second hole at the base of the tree;

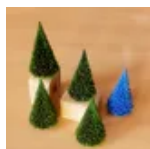

4. insert the tip of the tree into the hole at the top of the spring;

5. place the star on top of the spring;

6. enjoy!
