[crumpled](#) [paperbag](#)

We were doing virtual training on our Hexagon Absolute 83 Scan Arm and AS1 Scanner in the lab and when we finished I wanted to scan something more organic. We just happened to have a crumpled Taco Bell bag so we put it up on the table and carefully scanned all of the beautiful crinkled texture. This prints well in vase mode but if you want a more substantial bag, you could set your infill to 0%, 3 bottom layers, 0 top layers and 2 or more perimeters and it would work well. Adjust scale as necessary!
