Summary

Chess game without board. I used supports in it but I think it is not necessary in all the cards.

I bring you a chess game designed by me piece by piece. It was printed on a Creality Ender 3 v2 with a fill of 20%. I printed all of them with supports but it is not necessary, I would only use them on the horse that does need them and the king and queen

- Approximate total spent filament - 326 g
- Total hours of printing on my ender 3 pro v2 creality - 44 hs

Your donations help me continue creating content for the community, thank you
