Summary

Sleek modern design glasses holder stand. Great for nightstands, counters, and desks!

Simple modern design I created to hold my glasses next to my bed.

The model is printed in two parts that press fit together after printing. There's an optional "glasses_padding_insert" file to make your print unique with a different color and/or infill pattern if you desire. (I printed this in TPU so that's where the padding name came from) If printing a pad just for looks and not function, I've also included a thinner model "glasses_padding_insert_thinner." It will print faster and still give your print a cool multicolor look! This model doesn't require any supports, but be aware the stand file does have a steep overhang that will push your printer to it's limit!

I hope you enjoy the design, and please post pictures if you print it!
