[wallart](#) [homedecoration](#) [lasercutting](#)

These files are designed for the most part for laser cutting. But if you are not confused by the small size, you can also print them on a 3D printer.

To increase the size, you can cut these models into pieces, print them separately and then connect them with **glue.**

STL files are ready for printing on a 3D printer with a maximum print area size of 210x200. If your table size is larger, you can easily scale it to fit your size. To make a large-sized version of metal, wood or plastic, as in the picture, you will need the help of a laser cutter. To do this, I added dxf and svg files.

Wall mounting can be done using wall_mounting. It must be printed additionally and glued with **glue to the main decor. Then fix it on the wall with nails or screws or use **double-sided tape**.**

To achieve the wow effect, you need to place an **LED strip on the back of the decor.**
