I prefer drinking cold water which is why I store my SodaStream bottles in the fridge. But since they are round, they tend to randomly roll around in the fridge.

So I designed and printed this extendable rack for SodaStream bottles.

It's working great and the bottles are safely stored and cannot slip out in any way.

To prevent the rack from sliding around you can use some grippy stuff and glue it underneath.

If you want to connect two bottle holders you need to print two connectors.

Happy printing!
