This collection is a vial holder set for material sample showcase printed with PLA.

It can be used as a sample holder to showcase materials and small parts for your activity, exhibition, course, or research. This collection contains two sets of holders fitting most of the vials from 10 ml to 60 ml. However, the main design might require adjustments according to the specific vials to be showcased and their specific dimensions. Each set has a 2x, 3x, and 4x vial holder design.

Each part of the Vial Holder collection can be 3D printed in ~30 minutes (2x), ~40 minutes (3x), and ~1 hour (4x), respectively. They require no/minimum experience with 3D printing, and the parts can be printed without supports for better fitting and material usage optimization.
