A Catch-All/EDC shelf with a spot for all of your daily essentials. Keep all your daily carry items in one place, and ready to go. The shelf features a phone divot specifically to fit Max and Plus iPhone models. Mount your shelf directly above a bedside power outlet, and plug in the internal MagSafe charger to keep your phone charged and at the ready, the excess cable length can be wound up and stored inside the shelf, making for some satisfyingly tidy cable management.

Don't want to damage your wall or risk drilling a hole so close to an outlet? No worries, this shelf was designed specifically to mount without creating

any permanent wall blemishes. The shelf mount attaches to your wall using 2 medium sized Command Removable Adhesive Strips. The strips will hold the shelf firmly in place for as long as you like, but can be removed easily without damaging the wall or leaving adhesive residue.

Additional versions of the shelf are On their way, specifically versions for standard size and mini iPhone models. I'll also be providing a more comprehensive installation guide soon.
