[decorative](#) [sizes](#) [octagonal](#) [variants](#) [multisize](#)

Introducing the octagonal flower pot, a perfect blend of functionality and style. This pot's distinctive eight-sided design, with smoothly rounded corners, forms its foundational shape. The top rim of the pot is elegantly rounded, accentuating the pot's unique geometry with clean, unembellished lines. On the sides, a series of vertical ribs interact with light to create an engaging play of shadows. These ribs run straight from the top to the bottom, intersecting at the octagon's corners for a seamless look.

Beyond their decorative purpose, these ribs contribute significantly to the pot's sturdiness. Additional ribs at the bottom reinforce the pot, ensuring it remains robust, even when moved. Numerous small drainage holes are strategically placed to allow excess water to escape while preventing soil erosion and promoting air circulation.

This model comes in an impressive 62 size variations, ranging in height from 80mm to 400mm, and in diameter from 180mm to 400mm. It caters to a wide array of printers, from standard models like the Prusa MK3S+ to larger ones like the Prusa XL. To suit different preferences and requirements, three wall thickness options are available: 1.68mm, 2.0mm, and 2.5mm. This allows you to customize the material usage and determine the final sturdiness of your pot.

Printing the Pot

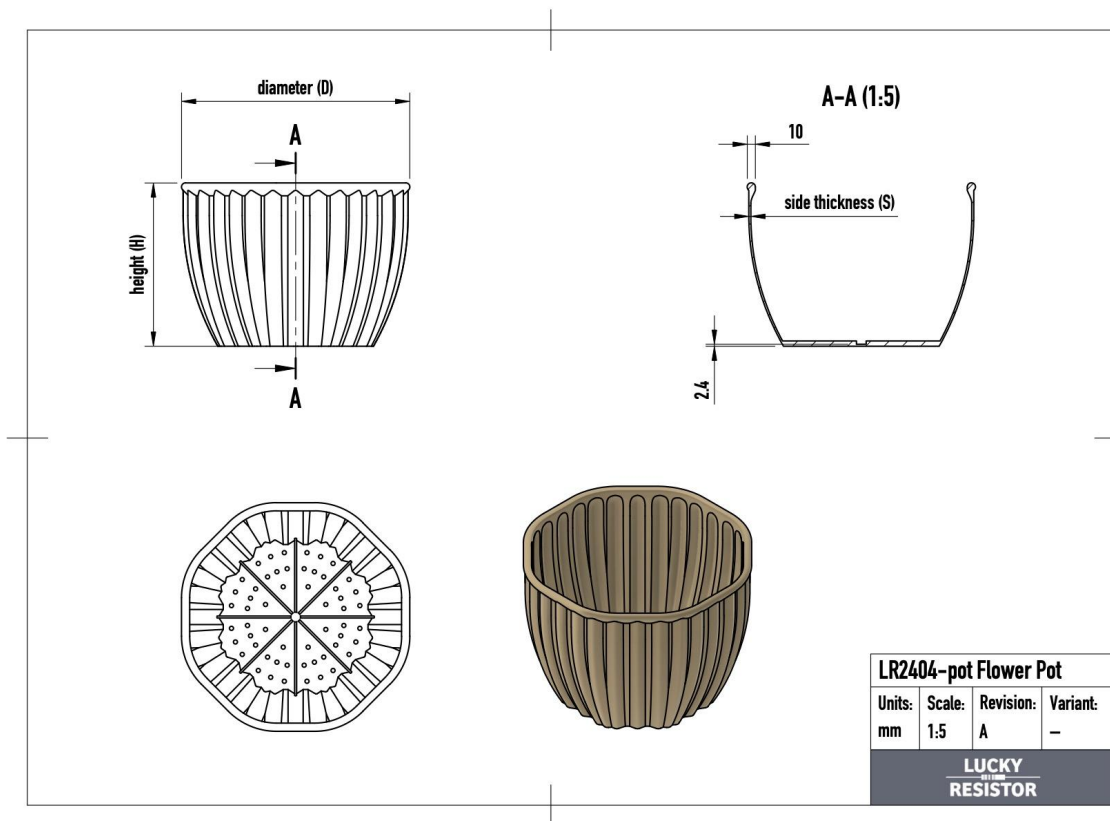

In the files section, you'll find PrusaSlicer example projects, offering basic settings as a starting point for your prints. For more detailed information, please refer to the table below:

Parameter	Description
Orientation	Refer to the example project.
Nozzle Size	0.4mm, 0.6mm, 0.8mm (see below)
Layer Height	Adjust according to nozzle size
Filament Materials	Recommended: PETG, ASA
Perimeters	2 to 3, based on wall thickness
Infill	15% (check slicer settings)

Nozzle Size and Layer Height

The pot is designed to print effectively with 0.4mm, 0.6mm, and 0.8mm nozzles, accommodating all wall thicknesses. Select a layer height appropriate for your nozzle size, and always review the sliced result before printing. Aim for the walls to be printed solely with perimeter lines, free of infill. For prints using a 0.4mm nozzle, consider increasing the number of perimeters to three or more for optimal results.

Dimensions

Each model file's name encodes the width (W), diameter (D), and side thickness (S). For example, consider the filename **LR2404-pot-S25-H200-D280.3mf**. This model has a side thickness of **S25** (2.5mm), a height of **H200** (200mm), and a diameter of **D280** (280mm).

Conclusion

This flower pot, with its unique octagonal design and ribbed structure, is sure to stand out in any garden setting. I hope you find these pots both

functional and aesthetically pleasing. If you enjoy these models, please consider rating this project and sharing photos of your prints!

Happy printing!
