This rack provides vertical storage of hobby paint brushes on one side, and on the other, a place to allow brushes to dry with the brush facing down.

One word of caution. 3D prints aren't necessarily great at retaining liquids and depending on your print, it could be possible for the solvents used to clean your brushes to seep out and get on whatever surface this sits on. So be aware of that, and don't set this down without some protection underneath.

I also designed a larger version which can be found [here](#).

Printing Tips

- ⚠ The part of this that is intended to hold the ferrule of the brush so it can dry should be printed in Flex material. This is so that that material's natural grip can better retain the brush.
- Do your own slicing for best results.
- No supports should be necessary.
