Summary

My wife has started her pickling again and asked me to design a large mouth funnel that she could use to fill the jars

[Household](#) > [Kitchen](#)

My wife has started her pickling again and asked me to design a large mouth funnel that she could use to fill the jars. Like always I took several measurements and put it on paper first. then transferred the Design into Fusion360. The base diameter is 73.50mm and it fits snugly. It is easy to install and remove and dos does not wobble. The upper Diameter is 137.70mm (5.42in or 5 27/64s). The Depth into the mason jar is 25.4mm. I printer this on the Creality K1. There are certified food grade Safe PLA filaments you can but off Amazon. I use CARBON,
