Summary

created this amazing skull with AI (partly and reworked in blender)

I was playing around with AI and created a few cool skulls.

Here you have Skull 4 which can be mounted on a wall..

Take a look at my other models, there are also decoration for wall mount and one to place it into a corner.

I recommend for printing:

- at least 3 perimeter with 0.4 or 0.6 line width
- 10% lightning infill with 2 connected walls
- Use supports for the prints. I usually use tree supports from 45 degree
- Brim e.g. 3 lines (for good adhesion of the supports)

Would be happy to see your makes!

To prevent any shitstorm: I know, not everyone is happy with models, which are AI created, but if you dont like it, you dont need to download it.

A lot of people like those models and for the decoration purpose, it makes no difference, if it is created by hand or AI. Creating a good model with AI will also take time and the rework in Blender also, it is not just creating and sharing. Keep that in mind and be respectful in the community.
