Summary

Nut Bowl with Filter

[Household](#) > [Other House Equipment](#)

Tags: [nut](#) [nuts](#) [bowl](#)

This is a 3D-printed solution designed to keep your nuts clean and free from the dust and tiny fragments.

Design Features:

Dual-Bowl System: This design includes an inner bowl with a hexagonal net that sits snugly inside an outer bowl. The net allows fine particles to sift through, leaving you with just the wholesome nuts on top.

Size: The bowl is circular and measures approximately 90mm in diameter, perfect for a personal serving of your favorite nuts.

Printing Tips:

Layer Height: Optimal results at a 0.2mm layer height.

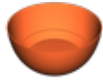

Supports: None required, making for an easy print.

Adhesion: If you encounter first-layer adhesion issues, consider adding a brim.
