Hexabot is a little robot that can hang around on your desk. I printed it with polyterra pla. The legs are not super sturdy, so be a bit careful.

The legs can be positioned in three modes, turn them 90 deg to face them down and you can push them in. If you turn them 45 deg you can push them halfway in to make Hexabot stand. And if you lay them flat he can lay down.

The legs might be a bit difficult to get out at first if you push them in, depending on your filament and printer etc., I used tweezers to get them out and then they were smooth.
