I needed a flower pot for my basil, so I made this one.

I uploaded the pot with and without holes, depending on whether you need the coaster or not. There are also two versions of this one, with centering and without.
Be sure to print the coaster so that it is waterproof. For this you can also use the **prepared 3mf files** .

The inside dimensions of the pot are as follows:
Height: 110mm
Diameter top: 128mm
Diameter bottom: 90mm

You can of course scale xy and z in the slicer to your desired size using a percentage calculation.

In the 3mf files some useful print settings have already been made, e.g. the z-seam in inconspicuous places or enough wall lines for a waterproof bowl.

If you like check out my other designs too!
