Summary

I really liked the design of the tensegrity planter, so I made this one that is a little longer out of preference.

I thought a longer model would be easier to fit a bigger plant, so that's what I made (it also looks cooler). Now I don't know how watertight the little planter cup is supposed to be, so I printed it in resin. Unsure what FDM material works out for that.

I printed this without supports just fine, but you need to trust the cooling capabilities of your printer if you want to do the same.
