This is my first **Karambit knife** design, intended to be assembled **without using screws**. Just put the blade on and you're done!
It is **compact and ergonomic**, which makes it **practical and comfortable** to carry and use.

You can use it like a **fidget spinner**!

It does NOT need supports.

If some tolerances do not fit, try modifying **-/+ the horizontal expansion** on the slicer.

I would like to receive your feedback to improve this design if necessary.

I hope you have fun printing my design!

I would like to see your print of this design! **Please upload your "make"**

tagging my design and leave a "like" and follow me! Help my work become even more visible.

If you like and want to share this design, **save it to your favorites** and share the link with whoever you want!

Follow me on instagram **@grz.3d**

ATTENTION!

It is important that each printer is well calibrated and the laminator well configured to achieve a good print!
