Summary

Planters with geometric patterns, either available with drain holes in their bottom or with an inside plant pot.

I decided to move away from Thingiverse and as a first upload to prusa's printables I choose my modern geometric pattern planters.

As a bonus for **printabled.com** I added a version with drain holes in the bottom of the big pots so that you don't have to use the inside planting pot.

Please keep in mind that they are under a **NON COMMERCIAL** license, so don't sell the files or prints using this design.

Original description on my thingiverse:

"I designed three geometric plant pots for some succulents. In addition, I created an inside pot for each planter with some holes in their bottom and a little offset from the ground so that excess water can escape."

They were designed to fit small succulents and have an inside width of ~60 to ~65 mm.

They are all around the same height (roughly 60mm from the ground).

[...]

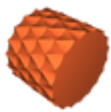

I would love to see your prints, so if you make one be sure to post a picture under makes.

If you like my designs or have any question leave a comment and maybe consider a little tip.

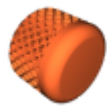

I also added a stl file for the base. Mine is made of concrete and not 3d printed, but I modeled it anyway to find out how the planters would look on it.

It is about 260 mm long so maybe you have to scale it down a little bit to make it fit on your print bed.
