This 3D-printed sculpture features the head and neck of a roaring dragon, but with a unique twist—it blends organic dragon shapes with mechanical, gear-driven elements. The lower neck and cheek areas are embedded with interlocking gears and panel-like surfaces, giving it a biomechanical or steampunk vibe.

The model's fierce open jaw and sharp teeth bring a dynamic, aggressive energy, while the neatly integrated gears suggest intelligent design—ideal for fans of fantasy, engineering, and sci-fi aesthetics.

How to Use It

Display Piece: Great for bookshelves, gaming rooms, desks, or maker spaces.

Gift Idea: A unique print for dragon lovers or mechanical/steampunk fans.

Painting Project: Add metallic or glowing paint effects to highlight the tech details.

Color Recommendations

Base Color: Silver, gunmetal gray, or matte black for a true mechanical feel.

Accent Gears: Brass, copper, or gold to emphasize the steampunk vibe.

Eyes and Mouth: Red or blue highlights for a glowing effect, especially if you add LEDs.

Printing Tips

Support Required: Yes – especially under the chin and inside the mouth.

Recommended Layer Height: 0.1–0.2 mm for smoother surface detail.

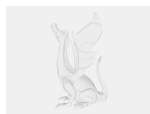

Infill: 15–25% is enough for sturdiness without wasting filament.

Material: PLA is fine for display; use PETG or ABS for more durability.
