A printable HoleSaw drill bit.

Suitable for soft materials like foam, if you need a certain size for limited use.

This was originally to make circular foam blanks but i decided it might be useful to others as a hole saw, so ive produced versions in a few common sizes of existing bits.

20,22,32,38,44,51,60,127mm -

happy to make more if you have a need. Each is embossed with its size.

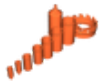

They should fit on a standard drill chuck, rather than using a plain rod or hex, i've made a triangular fitting that should handle more torque and be more printer compatible.

There are a couple of versions of fitting depending on size.
