The Trivenger is a very accurate and easy to throw boomerang.

The flight is very stable, with a fairly high trajectory. The boomerang brakes very well on the return which allows it to be easily caught, even with a finger.

If you are left-handed like me, you have to make the file symmetric in the slicer.

For a good result it is imperative to watch tutorials on youtube for example.

You'll find the sldprt solidworks 2019 file

Update 03/07/2021

Thanks for all your pictures, I'm very happy to see how you liked it ! and to see my design flying all over the world. :)

Now you can download the solidworks sldprt and stp. New stl update (repared with netfabb), in right and left hand versions.
