I designed this model as a torture test for printing at 0.4 Lh with a 0.4 Nozzle with a single wall. It's **not** meant to be printed in Vase Mode as the overhangs at the bottom of each spiral are too steep.

I believe it also has the potential to be printed with a 0.6 nozzle too.

Mine took 3h45min to print which is already fast given the size. I would be curious to see if it can be printed any faster, retaining a good quality.

Have fun and don't forget to share your makes.
