Hi, I've made this soap dish for the prusa contest.

The “bubble” grill is used to drain the soap bar, and the SOAP text in the side is used to drain water out of the box.

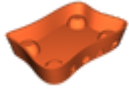

I've printed it in PETG, to improve the print time I've used 0.6 nozzle with 0.4 layer height, that's why the soap text is not so good, but I'm pretty sure that if you print with 0.4 nozzle and 0.2 layer height it would be perfect!

Hope you like it, Good contest to everyone!
