This UNO Card Box with multicolored logo is based on the [UNO Card Box](#) by Markus_p.

The 3MF file from the lid contains also the parts of the logo. PrusaSlicer opens this just fine, I don't know about other slicers. Use a pause/filament change/M600 command for color swapping for the first layer. Make sure your first layer height is 0.2mm, otherwise you must also swap colors on the second layer.

The inner card holder **could** be glued in place. Note that the beveled side should be at the front.

The box will not close if the card holder is glued the other way around. Test before gluing.

For the hinges you will need 6x additional M3x30mm screws.
