Summary

Display and store your skis with this minimalistic wall-mounted holder

[Sports & Outdoor](#) > [Winter Sports](#)

Using gravity and the curve of the skis, this wall mount keeps your skis off the ground. This mounts to the wall using standard wood screws and can accommodate skis up to 0.8" thick when stacked. Wall mounting keeps the edges from being damaged by concrete flooring and allows the skis to drip dry after a day on the slopes.

Print with the wall-side on the build plate. I had good results with 0.2mm layer thickness and as low as 15% infill, but higher infill is recommended for heavier skis
