This is a V2 style model rocket I modelled about a year ago. I painted it nicely and actually launched it with 1/2A3-2T engines. It is a short flight and doesnt go very high so I dont think there is much danger. There is no parachute and the pressure from the ejection charge will cause the empty engine to pop out, but its all for good fun. If you make this, please post a make and tell me how the flight went.

P.S just super glue the launch lug to the body.
