Summary

This is my variation to modular honeycomb wall key holder.

This is my variation to honeycomb wall key holder. Honeycomb as key holder is not my idea but I was not satisfied with any version I found on internet.

Honeycomb is attached to wall by 2 small screws but you can use both side tape if you want.

I printed a lot of keychains in different colors. My favourite is filament glowing in the dark. It makes keys visible in night and easy to find.

You can design your own hexagon modules to place in wall holder ;-)

Model contains:

- honeycomb holder

- hexagon keychain - 1 cell

- 1 cell hook for placing any keys or small items

(My printer is CR-10)

(In a photo you can see old version keychain but eyelet was not strong enough. I uploaded here very rigid v2.)
