Hello there,

i was upset having my shower wiper laying all the way around. So i created this ugliness. In my case it hangs on my shower door (glass) and holding the wiper like you can see on the pictures.

I use it to clean up the water drops after showering from the glass door and from the tiled wall.

Specs (might be wrong, long time ago):

layer height: 0,3

infill: 20% (gyroid)

Printed on a Creality Ender 3 S1 with stock settings of Cura Slicer.

If you have any kind of improvement to this please share it with us or at least with me so we can have a progress to this model. I try my best to get your ideas :)

Cheers, Chris
