This is the 50mm (interior diameter) sized canister of the original Rugged Waterproof Container. I submerged the container in the photos for over an hour, and found it fully eateproof

I used Prusa Orange PETG filament for the cylinder and lid to give it the ability to be Rugged, Visible and Weatherproof.

This folder also includes the file for the TPU gasket.

No supports or rafts are needed for this print.

You can also customize the height, from 28mm to 100mm, with the **customizer**. The default inside height of the provided model is 40mm.

This model does not require supports to print.

The Customizer is pretty easy to use:

1. Enter your desired inner height (28 to 100)
2. Press generate
3. Download
4. Have fun!
