I love illuminated terrain! And since I could not find any good free lamps that are meant to have an LED placed inside, I had to design them myself.

The lamp itself is designed so it can be printed in resin, for a nice high quality. FDM might be difficult due to the very small details. Print Lamp, Top in any colour and Shade in a transparent one for best results. I'd advise to first paint everything, and then place an LED in the lamp, with enough space on the bottom to place a CR1220 holder there. I used flicker LEDs that do not need any pre-resistor, make sure that you include a suitable resistor if you use normal LEDs.
