This is the newest revision of **The Rugged Container**.

Now featuring 2 sides, each with their own lid and gasket.

This model does print with support to the lower half, but I have it adjusted to the minimum amount of support needed. You will find that in the 3MF file.

The lid prints without support.

The real fun comes when you mix and match colors. It becomes addictive, believe me. Haha.

PETG fillament is recommended for the container and lid and TPU filament for the gasket.

Have fun.
