Summary

This is a cool planter that can be used with many plants.

[Household](#) > [Outdoor & Garden](#)

This is a remix of Keagan_Exsteen's excellent poly planter.

The original tapers inwards at the top which made it unsuitable for a number of plants. This one tapers outward which makes it perfect for many types of succulents and is much easier to handle when planting.

The original also had a number of geometry issues which caused it to print differently depending on the slicer. I repaired it and included a normal (96x96x48mm) and a mini (65x65x35mm) size.

Changelog

1.1. Added a solid model for vase mode printing.

This thing is made by OmNomNomagon user on thingiverse and was found here: <https://www.thingiverse.com/thing:2999036>.
